

Applying risk prediction to social service referrals

Joshua R Vest, PhD, MPH

Regenstrief Institute

Indiana University Fairbanks School of Public Health

DISCLOSURES

Support for this was provided by the Robert Wood Johnson Foundation through the Systems for Action National Coordinating Center, ID 75549.

Work was a collaboration with many colleagues:

Kasthurirathne SN, Vest J, Menachemi N, Halverson PK, Grannis SJ. Assessing the capacity of social determinants of health data to augment predictive models identifying patients in need of wraparound social services. *Journal of the American Medical Informatics Association* 2018;25. doi:10.1093/jamia/ocx130

Vest JR, Menachemi N, Grannis SJ, Ferrell J, Kasthurirathne S, Zhang Y, Tong Y, Halverson P. Impact of Risk Stratification on Referrals and Uptake of Wraparound Services That Address Social Determinants: A Stepped Wedged Trial. *American journal of preventive medicine* 2019;56:e125–33. doi:10.1016/j.amepre.2018.11.009

Vest JR, Grannis SJ, Haut DP, Halverson PK, Menachemi N. Using structured and unstructured data to identify patients' need for services that address the social determinants of health. *International Journal of Medical Informatics*. 107:101-106; 2017. doi: 10.1016/j.ijmedinf.2017.09.008. PMID: 29029685.

Joshua Vest is a founder partner in Uppstroms and a has provided consulting services to the New York eHealth Collaborative.

Social determinants, social factors, and social needs

Determinants

The conditions in which people are born, grow, live, work, and age.
Shaped by the distribution of money, power and resources.

Factors

Nonclinical, economic, contextual, and psychosocial characteristics that
are associated with poor health.

Needs

Immediate needs facing individuals.

Social factors and needs

Nonclinical, economic, contextual, and psychosocial characteristics

High school graduates

Higher education is associated with higher paying jobs which is associated with better health outcomes.

Individuals with lower educational attainment have higher rates of poor health behaviors like smoking.

Children are low income

Children in poorer families tend to have poorer health outcomes than children in wealthier families.

Children in lower income families have higher rates of asthma, injuries, and obesity.

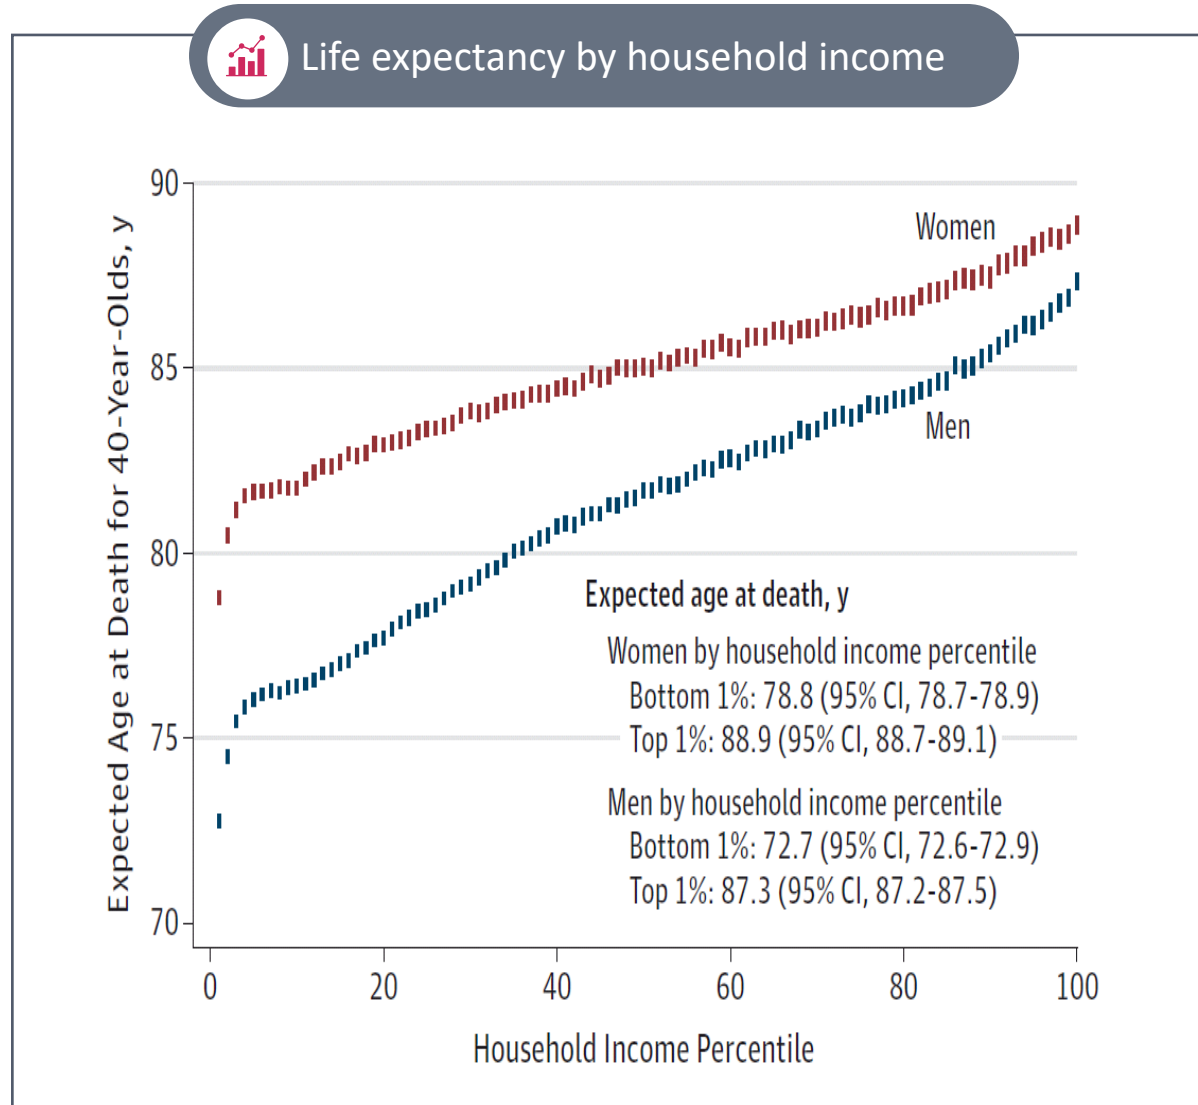

Food insecure households

Food insecure individuals are disproportionately affected by diabetes and high blood pressure.

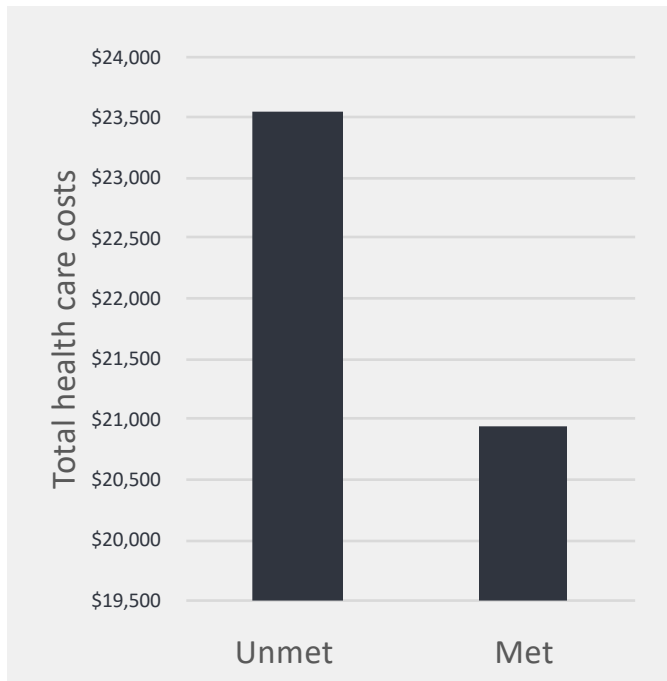

Food insecurity is associated with depression, anxiety and other behavioral health issues.

Increasing income associated with longer life expectancy

- ...men in the bottom 1% of the income distribution at the age of 40 years in the US have life expectancies similar to the mean life expectancy for 40-year-old men in Sudan and Pakistan...
- The 10-year gap in life expectancy between women in the top 1% and bottom 1% of the US income distribution is equivalent to the decrement in longevity from lifetime smoking.

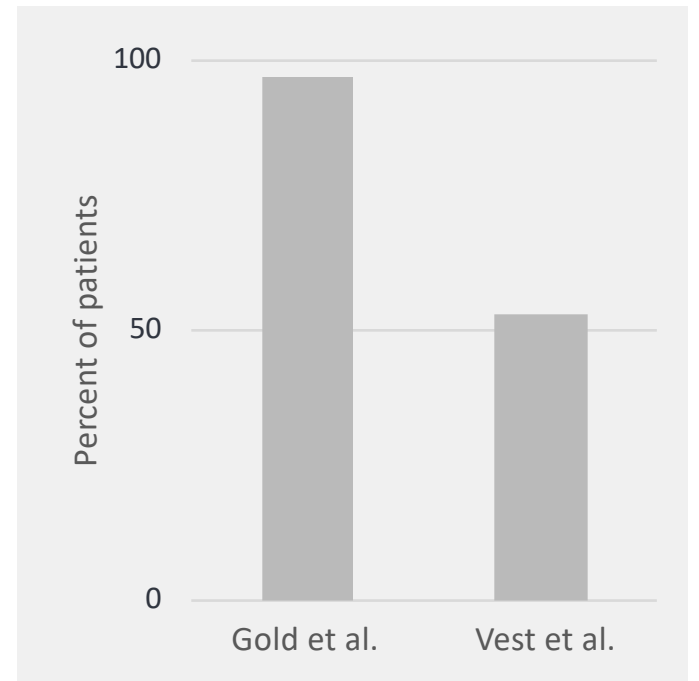

Challenges due to social factors

Why worry about AI? Why not just ask patients?

Numerous survey screening tools exist, but...

RESPONSE BIAS

Some patients (likely those at highest risk) may not respond to the most sensitive questions or ones they think are unrelated to health care needs

EHRs largely do not support social data collection, health systems utilize multiple & varying surveys are in use at the same time

WORKFLOWS

HOW TO SCORE

Survey screening tools collect questions on need but they don't indicate to providers what to do

Demographics
Behaviors
Diagnoses
Referral histories

ALREADY HAVE LOTS OF DATA

Project objectives

Improve patient health and wellbeing

Effectively and efficiently address patients' social needs

Proactive instead of reactive approach to social needs

Project objectives

Improve patient health and wellbeing

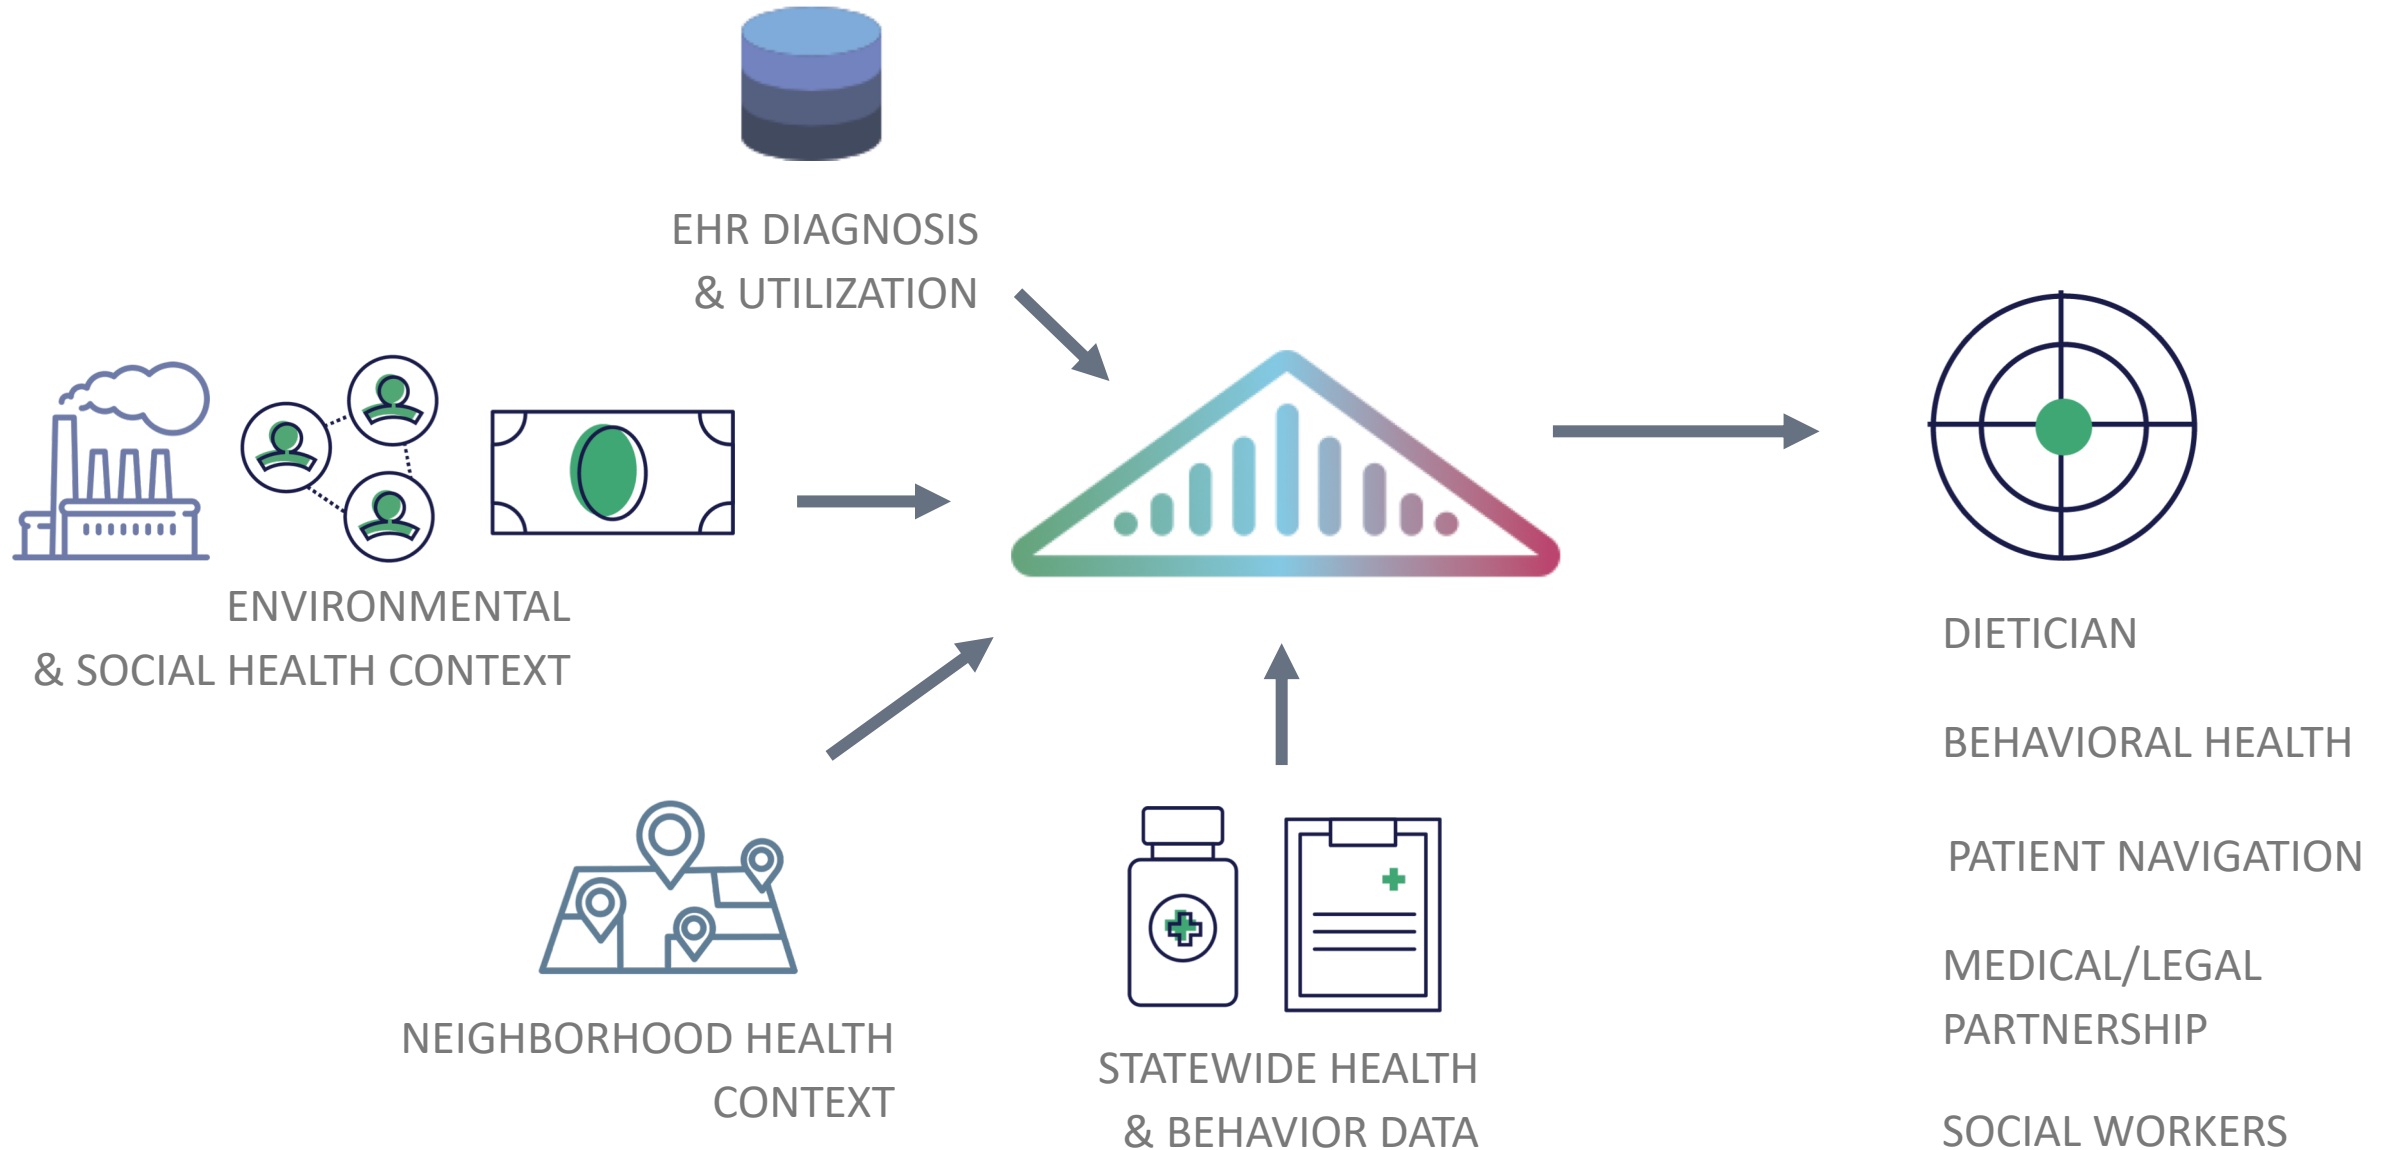

Effectively and efficiently address patients' social needs

Proactive instead of reactive approach to social needs

Using machine learning approaches to predict referral needs

Referrals to social services

SOCIAL WORKERS

- Increasingly employed by health systems
- Connect patients to community resources
- Coordinate care
- Counsel patients about personal issues

doi: 10.2105/AJPH.2017.304034

DIETITIANS

- Education
- Weight loss
- Better control for diabetic patients
- Support patients with CVD

doi: 10.1016/j.jand.2017.06.364

BEHAVIORAL HEALTH

- Improvements in functioning, depression, & anxiety
- Increase engagement in care
- Increased patient satisfaction

doi: 10.1016/j.genhosppsych.2018.04.002

Prediction performance

Hedges, Teresa

Female, 68y, 12/10/52

MRN: 3056667

Wraparound Risk Score

MRN: 3056667

Tobacco user: Yes

Diabetes: Yes

Most recent A1C: 6.2

Zip code: 46032

Last hospitalization: 2019 - 02 - 18

Last ED visit: 2019 - 06 - 25

Last social worker consult: 2019 - 08 - 11

Last dietitian consult: 2018 - 01 - 31

Last legal-medical consult: no record

Last behavioral health consult: 2019 - 09 - 20

Last financial consult: 2019 - 09 - 20

Risk calculated on: 2019 - 10 - 12

Behavioral Health Referral Score >

98% high risk

Prescription history: income instability

Social Work Referral Score >

50% medium risk

Other services referral score >

20% low risk

1024937	Martinez, Flora	Harris, G	02/02/65	Low risk	0.40	Rising risk	0.67	Low risk	0.50	Rising risk	0.20

Impact of risk prediction for referrals

65% increase in
social work referrals when
risk scoring went live at
primary care clinics

48% increase in
odds that referred patients
will keep their appointments

Key takeaways

**SOCIAL FACTORS ARE A CRITICAL
PART OF CARE DELIVERY**

**ASSURING FIT WITH WORKFLOW &
ACTIONABLE**
