Regenstrrief Institute
50 Years of Research and Innovation
Regenstrief Institute: Historical Overview

Dishwashers, Efficiency, Clinical Outcomes and AI!
Innovations to Implementation

**IDENTIFY**
- Research

**INVENT**
- Demonstrate

**IMPLEMENT**
- Disseminate

**Improved Clinical Care**

**Research:**
- **Centers/Programs**: Leverage our strengths to continue leading edge research and development efforts that impact health.

**Demonstrate:**
- **Living Labs**: Working with partners and stakeholders to develop innovative solutions to connect and innovate for better health.

**Disseminate:**
- **Scaling Solutions**: Work with sites as test beds of our innovations, systematically evaluate and iteratively improve - then disseminate via academic and commercial means.

OUTSTANDING FACULTY AND STAFF

- 62 Faculty Investigators
- 10 New Investigators
- 11 Investigators with a tenure of 20 years or more at Regenstrief
- 619 Total years of combined faculty experience at Regenstrief
RESEARCH

333 PUBLICATIONS WITH REGENSTRIEF AUTHORS

105 GRANTS, CONTRACTS AND PURCHASE OF SERVICES

TOTALING $48,344,419
BUSINESS DEVELOPMENT

25 NEW PARTNERSHIPS

$500,000 IN INNOVATIONS LICENSED

10 EVENTS WITH EXTERNAL PARTNERS
Artificial Intelligence for COVID-19 Outbreak Screening

Dr. Marco Antonio Gutierrez serves as the head of the Informatics Division, Heart Institute, University of Sao Paulo Medical School, Brazil. Dr. Gutierrez’s research focuses on the application of machine learning to segment and classify biomedical signals and medical images. Dr. Gutierrez was elected by the Brazilian Computer Society as a Senior Researcher in Computing Applied to Health. He holds bachelor’s and PhD degrees in electrical engineering and computer science from the University of Sao Paulo and completed postdoctoral training at the University of Southern California. Dr. Gutierrez will be joining the panel discussion following his address.

June 03, 2020
Panel: The Building Blocks in AI

Umberto Tachinardi
CIO - Regenstrief Institute
Director of Informatics – Indiana CTSI

June 03, 2020
With more than 30 years of experience in biomedical informatics, Dr. Umberto Tachinardi, CIO of the Regenstrief Institute, has a history of successfully developing and implementing health informatics technologies in organizations of all sizes. At IU and Regenstrief, his focus is to lead the informatics components of complex and large projects (Precision Health Initiative and the Indiana Center for Translational Sciences Institute – CTSI). Dr. Tachinardi was responsible for building and operating UW Health’s translational research resources such as data warehouses and new functions in the electronic health record systems.
Dr. Mohammad (Adib) Adibuzzaman is a research scientist at the Regenstrief Center for Healthcare Engineering at Purdue University. His primary research interest is in health data analysis using artificial intelligence techniques, more specifically, causal inference methods. His secondary research focus is in high performance computing infrastructure for very large data sets in health sciences. Dr. Adib has a PhD and a Master’s degree in Computational Sciences from Marquette University. Before going to Marquette, he worked as a Junior Research Assistant at the National University of Singapore and as a Software Engineer in Bangladesh. He also worked as an Oak Ridge Institute of Science and Engineering (ORISE) Fellow at the U.S. Food and Drug Administration in 2013 and 2014.

June 03, 2020
Dr. Allen Flynn worked as a network analyst for several years, followed by work in pharmacy practice as a hospital staff pharmacist. At Trinity Health, Allen was promoted to Informatics Coordinator. For the next eight years, he held informatics leadership roles while developing his expertise in EHRs and medication system safety. This real-world experience inspired him to focus his career on improving the knowledge-delivery capabilities of health IT. Today, Allen is an Assistant Professor who leads the Knowledge Grid research effort for the University of Michigan Medical School’s Department of Learning Health Sciences. His team aims to make computable biomedical knowledge more findable, accessible, interoperable, and reusable (FAIR).
Dr. Marco Antonio Gutierrez serves as the head of the Informatics Division, Heart Institute, University of Sao Paulo Medical School, Brazil. Dr. Gutierrez’s research focuses on the application of machine learning to segment and classify biomedical signals and medical images. Dr. Gutierrez was elected by the Brazilian Computer Society as a Senior Researcher in Computing Applied to Health. He holds bachelor’s and PhD degrees in electrical engineering and computer science from the University of Sao Paulo and completed postdoctoral training at the University of Southern California. Dr. Gutierrez will be joining the panel discussion following his address.
Topics Covered in this Panel

• The Building Blocks in AI
  • Data
  • IT infrastructure
  • Implementation
Data ▶ Model ▶ Action ▶ Impact

Validation
The Building Blocks in AI: Data

- Data integration – Retrospective/Prospective
  - Harmonization (Common Data Models, Mappings)
  - Linking patient level data

- Data quality
  - Accuracy
  - Completeness
  - Duplication

- Data governance
  - Data access
  - Ownership/Guardianship

- Ontologies
- Metadata, data models
- Real vs Synthetic data
The Building Blocks in AI: IT infrastructure

• Infrastructure
  • Storage + Computing + Network
  • On premise vs cloud
  • Data organization – Hadoop/Data Lake/Data Warehouse

• Compliance/Privacy
  • HIPAA
  • De-identified vs identified
  • Encryption

• AI in action
  • Interoperability, standards (e.g. FHIR)
  • MCBK
  • EHR APIs
  • Web services
  • Jupyter Notebooks
The Building Blocks in AI: Implementation

- Development of AI resources
  - Testing, Validation, Generalization
  - Certification
- AI resources as a product
  - Algorithm lifecycle
  - Governance/regulation
  - Commercialization (e.g. Liabilities, IP)
- AI and EHR systems
- Disparities, biases, fairness
- Localization (e.g. re-calibration)
- Safety
  - Active/Passive Monitoring
  - Dual/triple logic, manual override
- Education, training and certification
Data Infrastructure at Regenstrief
Data Infrastructure Future State:

- **Regenstrief Institute**
  - **DATA LAKE**
  - **OMOP Data Warehouse**
  - **Clinical Texts**
  - **SDoH**
  - **OnCore**
  - **Eskenazi-EDW**
  - **INPCR**
  - **IUH-EDW**
  - **Genomics**
  - **Claims**
  - **RedCap**
Data Capabilities Future State:
### Impacts

- Drive Innovation
- Accelerate Clinical Translational Research
- Enable Learning Health Systems/Real World Evidence (RWE)
- Informatics-Driven Research
- New Opportunities for Partnerships
- New Framework/Resource for Advanced Data Science
- Leverage Artificial Intelligence (AI) and Machine Learning (ML) in Healthcare
