Agenda

- Terminology
- Indiana Management Performance Hub
- Indiana Health Information Exchange
- Homeless Management Information System
- Monon Collaborative Data Integration Pilot
- Moving Forward
  - Privacy Considerations

Terminology

- Continuum of Care (CoC) Lead
  - Help convene key stakeholders and drive collaboration to lead Indianapolis' city-wide response to ending homelessness

- Homeless Management Information System (HMIS) Lead
  - Assist agencies and stakeholders collect and analyze data on people experiencing, or at risk of, homelessness and the services they receive

- Emergency Financial Assistance
  - Provide critical financial assistance to people experiencing an emergency that could lead to homelessness or other crises

Acronyms

- ADT = Admit Discharge Transfer Document
- CES = Coordinated Entry System
- CoC = Continuum of Care
- DSA = Data Sharing Agreement
- HMIS = Homeless Management Information System
- HUD = Department of Housing and Urban Development
- MCE = Managed Care Entity
- MPH = Management Performance Hub
- INPC = Indiana Network for Patient Care

Indiana Management Performance Hub

MPH: Mission

MPH provides analytics solutions tailored to address complex management and policy questions enabling **improved outcomes for Hoosiers.**

We empower our partners to leverage data in innovative ways, facilitating **data-driven decision making** and **data-informed policy making.**

Indiana Management Performance Hub

MPH: Our Data Partnership

MPH **does not house any direct programs**; it's an agent of its state agency partners.

MPH **serves state agencies and external partners** and adds value by unlocking data, connecting and analyzing across disparate systems, and sharing with agencies and external partners.

Indiana Management Performance Hub

MPH: Your Data Partner

MPH is positioned as the State of Indiana's hub for data-driven innovation and collaboration.

Understand how challenges intersect.

Merge disparate datasets.

Leverage technology.

Convene government agencies and community partners.

Homeless Management Information System (HMIS)

HMIS is an electronic database used to hold information on the characteristics and service needs of persons experiencing homelessness in the City of Indianapolis. Various funders require projects to record data in the HMIS database.

HMIS assist CoC leaders make data driven decisions by analyzing data entered into the system.

Continuum of Care Lead   HMIS Lead

HMIS: Who gets served?

The HMIS database can contain information on any persons experiencing housing instability – this includes those that need prevention services as well.

Clients fleeing domestic violence and staying at a shelter provided by a victim service provider are NOT in HMIS – they are in a separate system.

Monon Collaborative: Use Case

The use cases of connecting HMIS with healthcare data:

- Help to verify medical barriers
  - Potentially leading to a system wide decrease in total time to move clients into housing
- Provides information for better care coordination
- Improves opportunities for new lines of contact with the client
- Potential for new lines of funding for housing
- Discharge Planning

Monon Collaborative: Privacy Matters

HMIS is a partially open system:

- Client records are visible
  - Though case notes, disability information is not visible between organizations
- Individuals fleeing domestic violence do not participate in HMIS
- In the process of establishing DSAs between CHIP, IHIE, and MPH

Monon Collaborative Homeless Transitions-of-Care Pilot

Roster of clients in the HMIS to the state's Management Performance Hub (MPH).

FSSA beneficiary data to identify which are on Medicaid, and the assigned MCE.

Hospital queries INPC and sees HMIS flag and coordinates with the appropriate housing agency/MCE to coordinate emergency housing for discharge planning.

MPH data back to CHIP and IHIE

Homeless Management Information System (**HMIS**) data is managed in Marion County by the Coalition for Homelessness Intervention & Prevention (**CHIP**).

IHIE flags edited roster of HMIS clients identified as being Medicaid beneficiaries INPC and send a HMIS ADT to each MCE for their beneficiaries.

Challenges Ahead

- Duplication

- Data Sharing Concerns

- Data Quality Issues

- Solving for clients fleeing domestic violence and minors
